### The FTSE France 40 Low Carbon ESG Screened Decrement 50 Points Index

'Decrement' Index

The FTSE France 40 Low Carbon ESG Screened Decrement 50 Points Index (the "Index") is a 'decrement' index. This means the Index represents the performance of a strategy tracking a given gross total return index from which a pre-determined amount (a 'synthetic dividend') is deducted periodically. The synthetic dividend is expressed as a fixed amount independent of the Index level. Depending on the level of dividends paid by the relevant companies, a decrement index may perform differently in comparison to other market indices that include dividend adjustments due to the different dividend methodologies adopted.

A "price return" index is calculated on the basis that dividends paid on the components are not reinvested. A standard "total return" index is calculated on the basis that dividends paid on the components are reinvested, thereby increasing the value of the index compared to the price return version. Due to the fixed amount of synthetic dividend being subtracted from the Index, the Index will underperform an otherwise equivalent gross total return index where dividends are reinvested. In case the synthetic dividend is larger than the realised level of dividends paid by the relevant companies, the decrement index will underperform an otherwise equivalent price return index. In particular, because the ratio of the synthetic dividend relative to the price of the index components will increase as the index decreases, a decrement index is likely to underperform an otherwise equivalent price return index when the index is decreasing. This trend is even more pronounced for further drops of the index.

The FTSE France 40 Low Carbon ESG Screened Decrement 50 Points Index is built with a synthetic dividend of 50 index points.
