PERFORMANCE OF SHARE/INDEX/COMMODITY/COMMODITY INDEX/ETF SHARE/ETC/FX RATE/FX INDEX/INFLATION INDEX/INTEREST RATE INDEX/CASH INDEX AND OTHER INFORMATION CONCERNING THE UNDERLYING ASSET(S)

Past and future performance and volatility of the Relevant Underlying (being the S&P Eurozone Equal Sector Weight 50 50-Point Decrement Index with Bloomberg code: SPEUSPET Index) can be obtained by electronic means free of charge on the following website <https://www.spglobal.com>.

The Index Rules can be obtained by electronic means free of charge on the following websites <https://www.spglobal.com/spdji/en/documents/additional-material/sp-decrement-indices-parameters.pdf> and <https://www.spglobal.com/spdji/en/documents/methodologies/methodology-sp-global-bmi-sp-ifci-indices.pdf>

The S&P Eurozone Equal Sector Weight 50 50-Point Decrement Index

The S&P Eurozone Equal Sector Weight 50 50-Point Decrement Index (the "Index") is a 'decrement' index. This means the Index represents the performance of a strategy tracking a given gross total return index from which a pre-determined amount (a 'synthetic dividend') is deducted periodically. The synthetic dividend is expressed as a fixed amount independent of the Index level. Depending on the level of dividends paid by the relevant companies, a decrement index may perform differently in comparison to other market indices that include dividend adjustments due to the different dividend methodologies adopted.

A "price return" index is calculated on the basis that dividends paid on the components are not reinvested. A standard "total return" index is calculated on the basis that dividends paid on the components are reinvested, thereby increasing the value of the index compared to the price return version. Due to the fixed amount of synthetic dividend being subtracted from the Index, the Index will underperform an otherwise equivalent gross total return index where dividends are reinvested. In case the synthetic dividend is larger than the realised level of dividends paid by the relevant companies, the decrement index will underperform an otherwise equivalent price return index. In particular, because the ratio of the synthetic dividend relative to the price of the index components will increase as the index decreases, a decrement index is likely to underperform an otherwise equivalent price return index when the index is decreasing. This trend is even more pronounced for further drops of the index.

The S&P Eurozone Equal Sector Weight 50 50-Point Decrement Index is built with a synthetic dividend of 50 index points.
